

For release: 5 February 2007

Extra special products help everyone conform to Part F

Designed to enhance its market-leading range of slot ventilators and help window manufacturers and installers conform easily to Part F (Ventilation) of the new Building Regulations, Titon, Europe's leading ventilation specialist has launched a new range of slot vents: Trimvent[®] Select Xtra.

Available with EA (equivalent area) ratings of between 4,000mm² and 4,600mm², the Trimvent[®] Select Xtra range will make meeting the 'whole house' EA requirements of Part F – system 1 much easier. In new build situations, where there are a limited number of positions available for the installation of slot vents, the Xtra range will normally provide the necessary background ventilation to conform to Part F, without the need to consider other larger and more costly, options.

Like the rest of the Trimvent[®] range, the Xtra range will be marked with its EA values, making selection simple. Titon manufacture a wide range of trickle ventilators, both slot and glazed in to suit many different window applications. All the vents are easy to fit, suitable for timber, aluminium, PVCu or composite windows and are ideal for night ventilation without compromising security. Designed with the end user in mind, the vents are simple to operate and unobtrusive on the window.

Tyson Anderson, Titon's Sales and Marketing Director, said: "We are always looking at ways our products can make specifiers', window manufacturers' and installers' lives easier. The Trimvent® Select Xtra range is designed with this in mind, and unique in providing greater EAs through vents no bigger than they were before, we can make conforming to the new Building Regulations a relatively simple task."

In addition, Titon has also issued a guide for householders on the importance of trickle vents. Available for download from Titon's dedicated website (www.partf.co.uk), the leaflet can be printed out by installers and given to homeowners to explain the benefits of trickle vents.
